

Supplementary Fig. 1. The effect of different concentrations of SRPIN340 on cellular viability. AT II cells were treated with different concentrations of SRPIN340 (0, 5, 10, 15, 20 µM). CCK-8 assay was applied to evaluate the viability of AT II cells. All experiments were conducted in triplicate. ** $p < 0.01$, *** $p < 0.001$
